DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-5, 7, 9, and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Giuliani et al. in view of Michaels. Giuliani shows a driver assembly (24), a vibrating stimulator assembly (14) causing random movement and having a resonant frequency similar to the drive frequency (column 4, line 54), the resonant frequency increasing under load (column 9, line 38), base portion (15), and fingers (18), but does not show the range and the stimulator material/height. Giuliani shows a 150-400 Hz range, it does not include the range from 40-149 Hz. However, such a limitation is considered an obvious choice of design based on user preference and within the knowledge of a skilled artisan to suit various applications. Limitations drawn to specific dimensional values are considered obvious choices of design, within the skilled artisan. With regard to limitations regarding intended use (for salivary glands, etc...), the prior art has shown ALL the structural limitations of the apparatus claims, therefore the use limitations can be accomplished with the art cited. Michaels shows stimulator members (Fig. 1) that are flexible, resilient, and soft (column 3, lines 23-24) and of approximately the same height (Fig. 2). It would have been obvious to have used the stimulators of

Michaels because such stimulators would be considered obvious art-recognized alternative stimulators, known to a skilled artisan, to suit the particular need or situation.
